

# VBoard® Anchor

Our pallet anchors work well with most palletizing applications that use VBoard for corner or edge protection. These anchors help protect and stabilize your pallet loads by ensuring the VBoard stays in place. Your workers can use the anchors by placing them between layers of boxes or stapling or nailing them to the bottom of a pallet and placing VBoard into the slot.

## Stay-in-Place Shipping Solution

- Place between boxes, staple or nail to the bottom of the pallet and insert VBoard into the slot to hold VBoard in place and protect corners of pallet loads

## Versatility

- VBoard Anchor slit/opening holds the majority of VBoard size calipers

## Enhanced Worker Safety

- Enables machine operator to stand clear of stretch wrapper/bander, increasing process safety

## Cost-Effective

- Helps clean up the stretch wrap tail that is normally tied to the pallet runner, streamlining shipping preparation and minimizing waste
